## Online Shopping system.

A user friendly application which consists of a secure login along with different features, ~~some~~ to make payment faster and efficient. It also provides a range of accessories along with sorting options.

- This is used by 2 people user and the admin.
- The admin can view user info, the user can edit their own info and can access the products, also add them to the cart.
- The products are divided into different categories, Home, Misc, Electronics, Fashion, Groceries.
- Once the cart is ready to order, the user can place the order, after which they have to compulsorily give an online payment, then only the delivery is placed.
